

USER ACCEPTANCE TESTING (UAT) – FDS

Import Data Using Transform Maps

Date	03 October 2026
Team ID	6ab6292ddcdae33acb3906da
Project Name	Import Data Using Transform Maps
Phase Name	User Acceptance Testing (FDS)
Maximum Marks	4 Marks

1. Project Overview

Project Name	Import Data Using Transform Maps
Project Description	The project validates importing external data into ServiceNow using Import Sets and Transform Maps. The process maps source fields to target table fields, transforms the data, and creates or updates target records.
Project Version	1.0
Testing Period	03 October 2026 to 05 October 2026

2. Testing Scope

- Validate import of source data into the Import Set table.
- Verify correct field mapping between source and target tables.
- Verify Transform Map execution and transformation of imported records.
- Verify insert of new records into the target table.
- Verify update of existing records using the coalesce/matching field.
- Validate mandatory fields, data formats, and invalid/missing data handling.
- Verify import results, errors, and transformed record status.

3. Testing Environment

Application	ServiceNow
Environment	[Development / Test Instance URL]
Module	System Import Sets / Import Set Table / Transform Maps
Credentials	[Enter test credentials if required]

4. Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Import valid source data	1. Upload valid source file. 2. Select/import the Import Set. 3. Run the Transform Map.	Data is imported successfully and target records are created.	To be recorded by tester.	[] Pass [] Fail
TC-002	Verify field mapping	1. Import sample data. 2. Run the Transform Map. 3. Compare source and target fields.	Source fields are mapped to the correct target fields.	To be recorded by tester.	[] Pass [] Fail
TC-003	Insert new records	1. Prepare a source row with a new unique value. 2. Import the data. 3. Run transformation.	A new target record is created with the expected values.	To be recorded by tester.	[] Pass [] Fail
TC-004	Update existing records	1. Prepare data matching an existing	The existing target record is updated	To be recorded by tester.	[] Pass [] Fail

		record. 2. Import the data. 3. Run transformation.	instead of creating an unwanted duplicate.		
TC-005	Validate mandatory field handling	1. Remove a mandatory source value. 2. Import the data. 3. Run transformation.	The system identifies the invalid record/error according to the configured validation.	To be recorded by tester.	[] Pass [] Fail
TC-006	Validate invalid data	1. Enter an invalid value/format in source data. 2. Import the data. 3. Run transformation.	Invalid data is rejected or handled according to the configured transform/validation rules, with an appropriate error.	To be recorded by tester.	[] Pass [] Fail
TC-007	Verify transformation result	1. Import test records. 2. Execute the Transform Map. 3. Review transformed target records.	Target records contain correctly transformed values and no unexpected data changes.	To be recorded by tester.	[] Pass [] Fail

5. Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	[Record any defect found during UAT]	1. [Step 1] 2. [Step 2] 3. [Step 3]	[Low/Medium/High]	[Open/In Progress/Closed]	[Comments/feedback]
BG-002	[Record any additional defect]	1. [Step 1] 2. [Step 2]	[Low/Medium/High]	[Open/In Progress/Closed]	[Comments/feedback]

6. Sign-off

Tester Name	[Name of Tester]
Date	[Date of Test Completion]
Signature	[Tester's Signature]
Project Manager	[Name / Signature]
Product Owner	[Name / Signature]

7. Notes

- Ensure that all test cases cover both positive and negative scenarios.
- Record actual results clearly after executing each test case.
- Any defect should include severity, status, and reproducible steps.
- Tester feedback and improvement suggestions should be documented.
- Obtain sign-off from the project manager and product owner before deployment.
