Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	<i>Describe customer with 3-4 key characteristics - who are they?</i>	An HR administrator who keeps employee training records in ServiceNow, works with spreadsheets, handles personal employee data and needs reports by department.
I'm trying to	<i>List their outcome or "job" the customer is trying to achieve</i>	Load employee training records from a spreadsheet into ServiceNow, link each one to an employee, and let only HR managers see them.
but	<i>Describe what problems or barriers stand in the way - what bothers them most?</i>	Typing each record is slow and error-prone, columns and values must match the table exactly, and the department is not in the spreadsheet.
because	<i>Enter the "root cause" of why the problem or barrier exists - what needs to be solved?</i>	The data starts in spreadsheets outside ServiceNow, employee details live in the user table, and a new table needs its own access rules.
which makes me feel	<i>Describe the emotions from the customer's point of view - how does it impact them emotionally?</i>	Frustrated by repeated typing and worried about mistakes and about personal data being seen by the wrong people.

Example:

I am an HR administrator	I'm trying to load a spreadsheet into ServiceNow	But it takes a long time	Because data is typed in by hand	Which makes me feel Frustrated
-----------------------------	---	-----------------------------	-------------------------------------	-----------------------------------

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An HR administrator	load employee training records from a spreadsheet into ServiceNow	typing each record is slow and the rows must match the table fields	the data starts in spreadsheets outside ServiceNow	Frustrated and worried about mistakes
PS-2	An HR manager	see each training record together with the employee's department	the spreadsheet has no department, so it has to be looked up	the department is stored in the user record, not in the training record	Slowed down and annoyed
PS-3	An HR manager responsible for personal data	keep training records visible only to the right people	anyone with access to the instance could open the table	a new custom table needs its own role and access rules (ACLs)	Worried about privacy
