

Ideation Phase

Empathize & Discover

Date: 30 September 2026

Team ID: 6ab6292ddcdae33acb3906da

Project Name: Import Data using Transform Maps (Spreadsheet)

Maximum Marks: 4 Marks

Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool that helps teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

For this project, the user is a ServiceNow administrator or data analyst who needs to bring spreadsheet (Excel/CSV) data into a ServiceNow table using a Data Source, an Import Set and a Transform Map.

Empathy Map – Example

Think & Feel • Will my data import correctly? • I'm worried about duplicate records • Which column maps to which field? • What if the file has bad rows? • I don't want to enter data by hand • Is there a faster way?	Hear • Always test the import on a sub-production instance first • Make sure column names match the fields • Duplicates will break the reports
See • Import set rows with errors • Duplicate records in the target table • Empty fields after the import • Hundreds of rows to enter by hand	Say & Do • Upload the file to a Data Source • Create the Transform Map and map the fields • Run the transform and check the results • I can't tell why some rows were skipped • Fix the file and run the import again
Pain • Duplicate records • Fields map wrongly • Hard to find failed rows • Manual rework	Gain • Fast, accurate imports • No duplicate records • Clear error visibility • Less manual work
